

## **Non-Crawling Baby and CranioSacral Therapy**

**By: John Rollinson**

**Personal Information:** 12 month old girl

**History:** She had not yet turned over or crawled by age 12 months.

**Previous Tx:** N/A

### **Evaluation:**

**Findings:** She was not "penetrating" her body below T-4, apparently due to the shock of being separated from the mother at age 6 months for 2 weeks. When the mother left for a surgery, she stopped eating and communicating and when I met her she had an inner "block" to coming down into her body, not a lack of energy.

**Tools used:** We mobilized her dural tube from the cranial vault to the sacrum and blended with and supported the penetration of her energetic system down lower into her body. She also received a "Peru Balsam" oil bath.

**Objective results:** She began to turn over after the 1st treatment and to crawl after the 2nd and the bath, and has not stopped.

**Subjective results:** The mother is very happy.

**Length of sessions:** 45 minutes

**Number of sessions:** 2
